

Logan Miller

859-655-5041 | logan@lmiller.io | Loveland, OH | lmiller.io | linkedin.com/in/loganmiller5505

Education

Auburn University, Auburn, AL

May 2027

B.S. Computer Science — Artificial Intelligence Engineering Concentration, Honors Business Minor

Cumulative GPA: 3.82 | Honors College Member | Auburn Engineering Honors Circle (2025)

Experience

Data Engineer Intern, Medpace

May 2026 – August 2026

- Served as one of four engineers (manager, senior engineer, junior engineer, and myself) building a company-wide source of truth consolidating all active clinical trial data into Snowflake.
- Drove requirements-gathering sessions with product and business stakeholders, translating clinical trial data needs into technical specifications for the team's data models.
- Designed and built dbt models to transform and centralize clinical trial data, implementing the majority of the requirements I helped define.
- Developed a Prefect orchestration pipeline in Python and Snowpark, scheduling data loads via CRON against a custom configuration table to keep the unified source continuously current.

ALEC Team Student Verifier, Auburn University RFID Lab

April 2025 – Present

- Review and verify 4,000+ supplier RFID tagging procedures for standards compliance on confidential client engagements, auditing peer validations to maintain data accuracy.

Projects

ExoQuery: NASA Exoplanet Data Agent

Fall 2026 – Present

- Built an LLM agent (Groq) with purpose-built tools that answers natural-language questions over NASA Exoplanet Archive data backed by a Neon Postgres warehouse populated via a GitHub Actions-scheduled daily ingestion pipeline; deployed publicly on Streamlit.

exoquery.streamlit.app | github.com/LoganMiller5505/exoplanet-agent

Self-Hosted Media & Game Server Platform

May 2026 – Present

- Design, deploy, and operate a self-hosted media and game-server platform (Debian, Docker, ZFS) for up to a dozen concurrent users — 15+ containerized services running behind a Caddy reverse proxy.
- Secure and maintain the platform with Tailscale-isolated admin access, automated offsite backups, ZFS snapshotting, and a storm-tested disaster-recovery procedure validated through real power outages.

Spotify Genre Classification

Spring 2026

- Built a Random Forest classifier to predict genre from Spotify audio features (114 labels, 113K+ tracks); consolidated overlapping genres into five broader categories, improving test accuracy from 25.4% to 59.5%.

NFL Fantasy Football Predictions Model

Spring 2024 – Fall 2024

- Built and trained a solo Python model (Pandas, TensorFlow) to predict NFL players' weekly fantasy point totals, achieving a Mean Absolute Error of ~7 points.

Skills

Programming: Python, SQL, Java, JavaScript, C

Data Engineering: Snowflake, dbt, Prefect, Snowpark, PostgreSQL, Pandas, NumPy

Data Science / ML: TensorFlow, Keras, scikit-learn, Matplotlib, Seaborn

AI Tooling: Agentic workflows, LLM agents/harnesses, MCP servers

Infrastructure: Docker, Linux, Git, GitHub Actions, Caddy, Tailscale, Jupyter
